

CSIS 2610L - Programming and Problem-Solving Lab

Fall 2026 Syllabus, Section 05, CRN 42703,

Credit hours: 1

Instructor

James Dittrich

Email: jwdittrich@ysu.edu

Public Instructor Information

Instructor Title: Mr.

Instructor Professional Qualifications:

- B.A.S., Computer Information Systems, Youngstown State University, 2004
- M.S. Education (Curriculum & Improvement of Instruction), Youngstown State University, 2007
- Master's of Computing and Information Systems, Youngstown State University, 2012

Instructor Office Location: Tod Hall 135 (University Relations)

Instructor Office Phone: (330) 941-1328

Course Description

2610L. Programming and Problem-Solving Lab. Programming laboratory for CSIS 2610. This laboratory will meet for 100 minutes per week. Coreq.: CSIS 2610. 1 s.h.

Programming Course Sequence

CSIS 2610: Programming and Problem Solving covers the material in CSIS 1595 and 2605 in a single semester. If you do not have prior experience with programming (and the prerequisite of Math 1513 or Level 45 on the Math Placement Test), then you may consider registering for that course sequence instead. Note that credit will not be given for both CSIS 1595/2605 and CSIS 2610.

An alternative path is CSIS 1595: the first in a two-course sequence meant to give a comprehensive introduction to the design and implementation of computer programs, and taught using the Python language. The second course in the sequence, CSIS 2605: Fundamentals of Programming and Problem Solving 2 is taught using C++, builds on the material introduced in this course, and should be taken in the following semester if you plan on taking it.

Course Readings

Group	Title	Author	ISBN
Required	C++ Programming: From Problem Analysis to Program Design (8th ed.)	D.S. Malik	978-1337102087
Optional	The C++ Programming Language	Stroustrup, Bjarne	978-0133522853

The above Required text is a YSU Bookstore Digital Rental valid for 180 days that is already included in your course fees and available through Blackboard.

Or if you prefer print options that you will *own* indefinitely (e.g., as a reference), there exists a printed 8th edition that may also be available (ISBN-13: 978-1337102087)

The Optional text is an excellent reference book if you ever need a C++ refresher or want to see working examples of the use of standard libraries, written by the designer of the language.

The course readings are subject to change in the event of extenuating circumstances, research developments, current events, and/or to ensure better learning.

Schedule of Topics and Assignments

Day	Date	Proposed Topic	Due/To Prepare for Class
Fri	8/28	Coding environment, Linux shell basics, compiling with gcc	
Fri	9/4	Basic I/O, variables and assignment, data types, type casting and conversion, arithmetic operators and expressions, operator precedence, console I/O, formatting output	
Fri	9/11	Boolean logic, variable comparison, conditional statements and relational operators	
Fri	9/18	Testing programs with branches, nested control statements	
Fri	9/25	Math libraries, randomness, counter loops, testing programs with loops	
Fri	10/2	Algorithm design and program development, nested loops, input validation	
Fri	10/9	Defining & calling functions, Parameter passing (call-by-value), Returning values from functions, Variable scope	
Fri	10/16	Recursive functions, file I/O, parsing strings/ tokenization, string type, string formatting and string member functions	Exam 1 Lab Fri 10/16
Fri	10/23	Arrays, vectors, multidimensional arrays & vectors	
Fri	10/30	Searching & basic sorting, structs, arrays & vectors of structs	
Fri	11/6	Pointers, dynamic memory allocation, addressing, call-by-value vs. call-by-reference, using pointers in data structures/ linked list	
Fri	11/13	Pointers to arrays, pointer arithmetic, passing pointers as function parameters	
Fri	11/20	Dereferencing pointers, pointers as return types	Exam 2 Lab Fri 11/20
Fri	11/27	Introduction to OOP, constructors, destructors, public vs. private, getters and setters, this keyword	
Fri	12/4	Inheritance, polymorphism, virtual functions	
Fri	12/11		Final Exam Labs DUE 12/11

The course schedule, policies, procedures, and assignments in this course are subject to change in the event of extenuating circumstances, by mutual agreement, and/or to ensure better learning.
