

ISEN 2610 - Engineering Statistics

Fall 2026 Syllabus, Section 01, CRN 43183,

Credit hours: 3

Instructor

Seok Gi Lee

Email: slee10@ysu.edu

Public Instructor Information

Instructor Title: Assistant Professor

Instructor Professional Qualifications: PhD, Industrial and Manufacturing Engineering, Pennsylvania State University

Instructor Office Location: Moser 2465

Instructor Office Phone: 330 941 7116

Course Description

2610. Engineering Statistics. Applications of data collection and analysis techniques to engineering problems. Techniques for data structuring, data modeling, parameter estimation, and design of experiments utilizing engineering data. Prereq.:C or better in one of MATH 1570 or MATH 1571 or MATH 1571H or MATH 1585H, C or better in either ENGR 1550 or ENGR 1550H. 3 s.h.

Course Readings

Group	Title	Author	ISBN
Optional	An Introduction to Statistical Methods and Data Analysis	R. Lyman Ott and Michael Longnecker	1305269470
Optional	Engineering Statistics	Montgomery, Runger, Hubele	0470631473

All course content will be summarized in PowerPoint slides and uploaded to Blackboard.

The course readings are subject to change in the event of extenuating circumstances, research developments, current events, and/or to ensure better learning.

Course schedule (subject to change depending on the progress of the lecture)

Week of	Proposed Topic	Due/To Prepare for Class
8/24	Probability concept Computing probability	
8/31	Random variables - discrete Bayes rule	
9/7	Random variables – continuous Jointly distributed random variables	
9/14	Data description – measures of central tendency Data description – measures of variability	
9/21	Box plots	
9/28	Sample distribution of the mean Central limit theorem	
10/5	Introduction to inferences Confidence interval for the binomial parameter	
10/12	Inference for the population mean t-distribution Confidence interval for population mean	

10/19	Null and alternative hypothesis Choosing the hypothesis
10/26	The nature of hypothesis testing
11/2	Introduction to comparing two population means Comparing two population means: paired data Comparing two population means: independent samples
11/9	Comparing two population proportions with independent samples
11/16	Contingency tables and Chi-square test of independence
11/23	Simple Linear Regression Thanksgiving holiday
11/30	Correlation coefficient and coefficient determination Simple linear regression for forecasting
12/7	Review materials

The course schedule, policies, procedures, and assignments in this course are subject to change in the event of extenuating circumstances, by mutual agreement, and/or to ensure better learning.
